Cell = the round in which those two meet. Every pair meets exactly once.

FORMAT. Eight throwers, seven rounds, twenty-eight matches — every thrower meets every other exactly once. Seven games each, no byes. Assumes four lanes running concurrently.
SCORING. Throws score 0, 1, 2, 3, 4 or 6. Throw 10 may be a killshot worth 10. Perfect game = 64. A drop or empty box counts as 0 — write the 0, don't leave it blank.
FILL THE RUN ROW EVERY THROW. It is the only way a bad total is caught on the night rather than a week later. If a throw is corrected, re-tally the run row from that throw onward and redo the total.
