SCORING. Throws score 0, 1, 2, 3, 4 or 6. Throw 10 may be a killshot worth 10. Perfect game = 64. A drop or an empty box counts as 0 — write the 0, don't leave it blank.

FILL THE RUN ROW EVERY THROW. It is the only way a bad total gets caught on the night instead of a week later. If you correct a throw, re-tally the run row from that throw onward.

CORRECTIONS. Strike the old value, write the new one clearly, and redo the run row and the total.
